About Sonoma Clean Power (SCP)

As a community choice aggregator or “CCA,” SCP is a public agency and the default electricity provider for Sonoma and Mendocino counties. We source clean energy from renewable resources—geothermal, water, wind, solar, and biomass—and deliver our power to residents and businesses throughout our service territory. At Sonoma Clean Power, we’re invested in the communities in which we live and work. We deliver services that enhance quality of life through competitive pricing, improved air quality, and energy efficiency. By changing the way residents source and use energy, we’re able to deliver customer programs that make a difference in everyone’s life.

Powered by innovative thinking, Sonoma Clean Power was formed to provide a choice beyond for-profit, investor-owned utilities. Today, SCP is a model for community choice programs throughout California. By providing higher percentages of renewable energy that reduce greenhouse gas emissions, our customers are helping solve the climate crisis at a local level.

Summary Description

Persons working in this position will work across the organization with SCP leadership and staff in some or all functions related to power supply planning, demand load forecasting, risk management, and settlements. The individual in this position will develop significant subject matter expertise in SCP’s operations, and will be required to work independently on various projects as they come up, including topical research, model building, customer energy data analysis & reporting, database development and process improvement.

As systems are implemented, this position will have increasing and significant autonomy to explore novel solutions to problems facing SCP as a load-serving entity (LSE) with core goals of reducing greenhouse gas emissions, maintaining competitive and stable electric rates, supporting local economic development in Sonoma and Mendocino counties, and meeting SCP’s obligations under various legislative and regulatory mandates.
