

# Envision UC Davis

**OPENING NEW HORIZONS ON GRADUATE EDUCATION**

When Daniel Castaneda visited UC Davis on an Envision tour, he was looking for a graduate program that would support his eventual goal of becoming a public historian. Castaneda, now a history Ph.D. student, chose UC Davis because of its commitment to diversity, educational opportunity and support for first-generation college students like him.

Demand is growing across every sector for talented, prepared professionals who can translate academic research into solutions to global challenges. To respond to this critical industry need, UC Davis has a vision to cultivate a diverse graduate talent pool in California and across the nation.

**UC Davis graduate students in every field are ideally poised to transform their expertise into action.**

## The Vision

Envision UC Davis makes graduate school accessible to California's most promising undergraduates and streamlines the application process for prospective graduate students.

In their junior year, undergraduate Envision participants travel to UC Davis to learn about graduate programs, engage with faculty and university leadership, and receive mentorship in the application process. Every undergraduate who completes the program can apply to UC Davis for free.

# Envision UC Davis: Opening New Horizons on Graduate Education

## Philanthropic Opportunities

- Fund grants that allow an even greater number of students to participate in exploring graduate education
- Create a dedicated fund for Envision UC Davis participants' travel, accommodation and application fees
- Establish flexible funding to help students weather unforeseen challenges while staying on track in their programs

## An Invitation

Your support is vital to achieving our mission of preparing tomorrow's leaders to creatively and collaboratively address our world's most urgent issues. We invite you to consider a gift that will launch outstanding graduate students into careers in every sector—and into entrepreneurial ventures where they will spearhead discoveries with global impact.
